

Sadia Sultana

Full Stack Developer React.js Node.js MERN Stack SaaS Government Systems

Rawalpindi, Pakistan ssdev902@gmail.com +92 311 5401253 [linkedin.com/in/sadia-sultana-11b04b2b6](https://www.linkedin.com/in/sadia-sultana-11b04b2b6)
github.com/codecraftress919

PROFESSIONAL SUMMARY

Full Stack Developer with hands on experience building secure, scalable web applications and REST APIs across government digital infrastructure, fintech platforms, marketplace products, and an independently shipped SaaS product. Currently building and maintaining production systems at NACTA HQ for the Government of Pakistan using React.js, Node.js, Express.js, and role based access control for sensitive national security workflows. Built AudienceRelay at audiencerelay.com, a live SaaS marketing operations platform with lead capture, social content planning, AI creative tools, a public developer REST API, and a four tier billing system, delivered entirely as a personal project. Comfortable across the full stack, experienced in Agile environments, and focused on code quality, security, and shipping products that genuinely work for users.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, HTML5, CSS3, XML, SQL

Frontend: React.js, React Native, Redux, Redux Toolkit, Tailwind CSS, Responsive Design, Web Vitals, Accessibility (WCAG), Cross-Browser Compatibility, Component Architecture

Backend: Node.js, Express.js, REST API Design and Development, JWT Authentication, OAuth 2.0, Google Auth, Role Based Access Control, Session Management, Input Validation, Secure API Communication

Databases: MongoDB, Firebase Realtime Database, Firestore, Database Schema Design, Query Optimisation, Data Modelling for Financial Systems

Security: JWT, Role Based Access Control, Two Factor Authentication, KYC Workflows, Transaction PIN Management, Device Verification, Session Management, Signed Webhooks, Secret Key Authentication, Secure Financial API Design

Mobile Development: React Native (iOS and Android), Cross-Platform Mobile Development, Android (Java and XML), Mobile Performance Optimisation, Debugging across iOS and Android

Testing and Quality: Unit Testing, Integration Testing, Debugging, Code Reviews, API Testing with Postman, Performance Auditing with Lighthouse, Error Handling and Logging

Cloud and DevOps: Git, GitHub, Docker, Continuous Integration and Continuous Deployment Pipelines, Vercel, Render, Cloudinary API, Environment Configuration, Release Management

SaaS and Product: Full SaaS Architecture, Multi-Tier Billing Systems, Webhook Design and Delivery, Developer API Design, OAuth Provider Integration, AI Creative Tool Integration, Cursor Pagination, Pystack Integration

Design and Collaboration: Figma, Adobe XD, High Fidelity Prototyping, Design System Documentation, Figma to Code, Agile and Scrum, Jira, Cross-Functional Team Collaboration

CS Fundamentals: Data Structures, Algorithms, System Design Concepts, Object Oriented Programming, RESTful Architecture, API Documentation, Problem Solving

PROFESSIONAL EXPERIENCE

Full Stack Developer *May 2025 to Present*

Government of Pakistan (NACTA HQ) Islamabad, Pakistan

- Build and maintain full stack web applications for internal government management systems using React.js, Node.js, and Express.js, working on digital infrastructure supporting sensitive national security operations.
- Design and develop RESTful APIs supporting real time data processing across multiple internal government modules, ensuring reliable and consistent data flow between interconnected system components.
- Implement role based access control and secure JSON Web Token authentication to protect sensitive government data, applying defence in depth security practices across every layer of the application stack.
- Write clean, modular, and maintainable code following established architecture patterns, enabling the team to iterate on features quickly while keeping the codebase stable, testable, and auditable.
- Collaborate closely with backend, database, and security teams to deliver features meeting strict government compliance standards and data protection requirements.
- Participate in code reviews, contributing to team quality assurance, shared coding standards, and knowledge transfer across a cross functional government technology team.
- Contribute to system architecture decisions, helping design scalable and secure solutions for internal government workflows used across departments and operational divisions.

Node.js Developer (Team Member) *Mar 2025*

HelloBob Remote (Client Project)

- Contributed to backend development on a crypto fintech platform supporting wallet management, crypto deposits and withdrawals, asset swaps, transaction tracking, and crypto to Naira payout workflows for 50 plus digital assets.

- Developed and maintained RESTful APIs using Node.js and Express.js for authentication, wallet operations, transaction management, and account administration following secure API design principles.
- Implemented secure financial workflows covering KYC verification, two factor authentication, transaction PIN management, device verification, and session management for a real money product.
- Integrated backend services for crypto transaction processing, real time transaction status updates, market data retrieval, and Nigerian bank payout flows using external provider APIs.
- Worked with MongoDB for managing financial and user data, implementing input validation, structured error handling, and secure API communication throughout the codebase.
- Collaborated with frontend and mobile developers to align backend API contracts with client consumption patterns and deliver reliable user facing financial features.
- Followed secure coding practices and participated in code reviews to maintain code quality, consistency, and compliance with financial system reliability requirements.

Backend Developer (Team Member) *Mar 2025 to Mar 2026*

Hollyway Global Remote (Client Project)

- Contributed to backend development on a Nigeria focused marketplace platform connecting buyers and sellers across vehicles, electronics, furniture, appliances, and business stock as part of an engineering team.
- Developed and maintained RESTful APIs using Node.js and Express.js for marketplace listings, buyer requests, transaction workflows, and user account management.
- Implemented escrow based transaction flows covering verification, payment, dispatch, inspection, and seller payout stages, ensuring each stage transitioned correctly with proper state management.
- Built backend logic for buyer and seller matching, wanted item request handling, order processing, and transaction state management across the marketplace.
- Integrated external payment, logistics, and delivery service APIs to support local, nationwide, and cross border transactions within the platform.
- Worked with MongoDB for managing users, listings, buyer requests, transactions, and marketplace data, maintaining clean schema design and query performance.
- Contributed to consistent error handling, input validation patterns, and API contract documentation across backend modules in collaboration with the engineering team.

UI/UX Designer *Jul 2025 to Sep 2025*

Tulip Tea (Haji Abdul Waheed Group of Industries) Remote

- Designed user friendly mobile app interfaces aligned with Tulip Tea's brand identity, translating stakeholder requirements into high fidelity Figma prototypes ready for developer handoff.
- Partnered remotely with the development team to refine interaction flows, clarify component behaviour, and improve the overall user experience across key app screens.
- Applied UX research principles to understand user journeys and pain points, grounding design decisions in real user needs rather than assumptions.
- Iterated on designs through structured feedback cycles with stakeholders and developers, balancing visual quality with practical implementation constraints.
- Built and documented a component style guide that maintained design consistency across screens and gave the development team a reliable reference during implementation.

React Native Intern *Aug 2024 to Sep 2024*

CodeAlpha Remote

- Built and maintained cross platform mobile app features using React Native following clean and maintainable component architecture patterns that kept the codebase organised and scalable.
- Debugged and resolved UI and UX issues across iOS and Android platforms, improving component consistency, interaction reliability, and usability across both environments.
- Worked with senior developers on feature implementation, gaining experience with production grade mobile development workflows, code review practices, and release processes.
- Contributed to improving app stability by identifying and resolving rendering inconsistencies and state management edge cases that affected user experience.
- Followed Agile development processes, participated in sprint tasks, and communicated progress and blockers clearly within the engineering team.

React Native Intern *May 2024 to Jul 2024*

DEN Pakistan Pakistan

- Contributed to cross platform mobile application development, implementing new features and resolving reported bugs across iOS and Android builds.
- Optimised app performance by identifying and resolving rendering bottlenecks and state management issues causing slowdowns in key user flows.
- Improved component structure and code organisation in areas of the app I worked on, making it easier for the broader team to build on and maintain.
- Followed Agile development workflows, worked within sprint cycles, and collaborated with team members on feature delivery, testing, and QA.

- Gained hands on experience with React Native navigation, component lifecycle management, and REST API integration in a live production environment.

PROJECTS

AudienceRelay audiencerelay.com *2025 to Present*

Full SaaS Marketing Operations Platform Personal Project

- Built a complete SaaS marketing operations platform from scratch covering waitlists, contact forms, newsletter signups, and custom lead capture workflows with consent aware audience data management for multiple brands and workspaces.
- Designed and built the social content planning workspace with post drafts, image and video brief creation, multi channel publishing calendar, team approval workflows, and scheduling automation across Facebook, Instagram, LinkedIn, TikTok, and X.
- Integrated AI creative tools for automated brief generation, image creation using OpenAI image generation API, and content direction, reducing content production time by delivering structured creative assets directly inside the platform.
- Built a public developer REST API with form token authentication, allowed origin management, signed webhooks with secret verification, API key management, and cursor based pagination supporting external data access at scale.
- Implemented an advertising workspace allowing teams to plan cross network campaigns, objectives, budgets, audience targeting, and creatives while retaining direct billing control inside their own ad accounts.
- Designed and shipped a four tier billing system at Free, Starter at \$49 per month, Growth at \$99 per month, and Agency at \$249 per month with Paystack checkout supporting Nigerian Naira payments.
- Delivered full product independently including authentication, multi seat team management, brand workspace isolation, AI credit system, social media OAuth provider connections, and live support integrations as a solo personal project.

DevBlog Hub *2025*

Full Stack MERN Blogging Platform Personal Project

- Built a full stack MERN blogging platform enabling developers to create, publish, and share technical tutorials and project write-ups, with secure user authentication, category based filtering, and search functionality.
- Designed a clean responsive reading and writing interface optimised for a technical developer audience, with Lighthouse performance scores exceeding 90 across mobile and desktop.

Quotation and Invoice Management System *2025*

Client Project React.js

- Built a React based quotation and invoice application for a solar and electronics retail client, solving CSS print pagination and PDF generation issues using an iframe based print approach for reliable print ready output.
- Integrated Google Authentication for secure login and the Cloudinary API for profile media management in a responsive modular interface, reducing document creation time for the client team significantly.

CERTIFICATIONS

MERN Stack Development: Practical full stack development with MongoDB, Express.js, React.js, and Node.js

JavaScript Algorithms and Data Structures: freeCodeCamp, 2022

Responsive Web Design: freeCodeCamp, 2021

EDUCATION

Bachelor of Science in Computer Science **CGPA 3.3 / 4.0** *2022 to 2026*

Pir Mehr Ali Shah Arid Agriculture University, Rawalpindi, Pakistan

Relevant Coursework: Data Structures and Algorithms, Object Oriented Programming, Database Systems, Operating Systems, Computer Networks, Software Engineering, Web Technologies
